Project Demonstration Phase

Project Title: Automated Ticket Classification using Flow Designer

During the Project Demonstration Phase, the developed ServiceNow application is demonstrated to show how Flow Designer automatically classifies incoming tickets based on predefined conditions.

The demonstration includes:

Creating or submitting a new ticket.

Capturing the ticket details in ServiceNow.

Triggering the Flow Designer workflow automatically.

Checking the ticket information and applying classification rules.

Automatically assigning the appropriate category/classification.

Updating the ticket and showing the final result.

The demonstration proves that the automated ticket classification process reduces manual effort, improves consistency, and helps tickets reach the appropriate support team more efficiently.
